

# Technology for business benefit

**Niklas Savander**  
**Executive Vice President**  
**Technology Platforms & Nokia Design**

**NOKIA**

# Multiple product creation modes for optimal business return

## Key metrics include:

- Gross Margin/R&D Cost
- New Product Revenue
- Cycle Time
- Output
- On Time Delivery
- Requirement Management

### MAKE

Maximum gross margin contribution and opportunity capture

### SPECIFY

Innovations fitted for consumers, trade customers, and Nokia

### BUY

Cost leadership through scale

### USE & CONTRIBUTE

Focus on cost efficiency and differentiation

# Chipset cost advantage and technology leadership

IPR

IN-HOUSE DESIGN

OWN PROTOCOL SW  
DEVELOPMENT

SOURCING WITH SCALE  
BENEFIT

## Technology Leadership

- Best fit for Nokia phones
- Faster migration to leading silicon processes across the portfolio

**WCDMA chipset cost advantage 20%+**

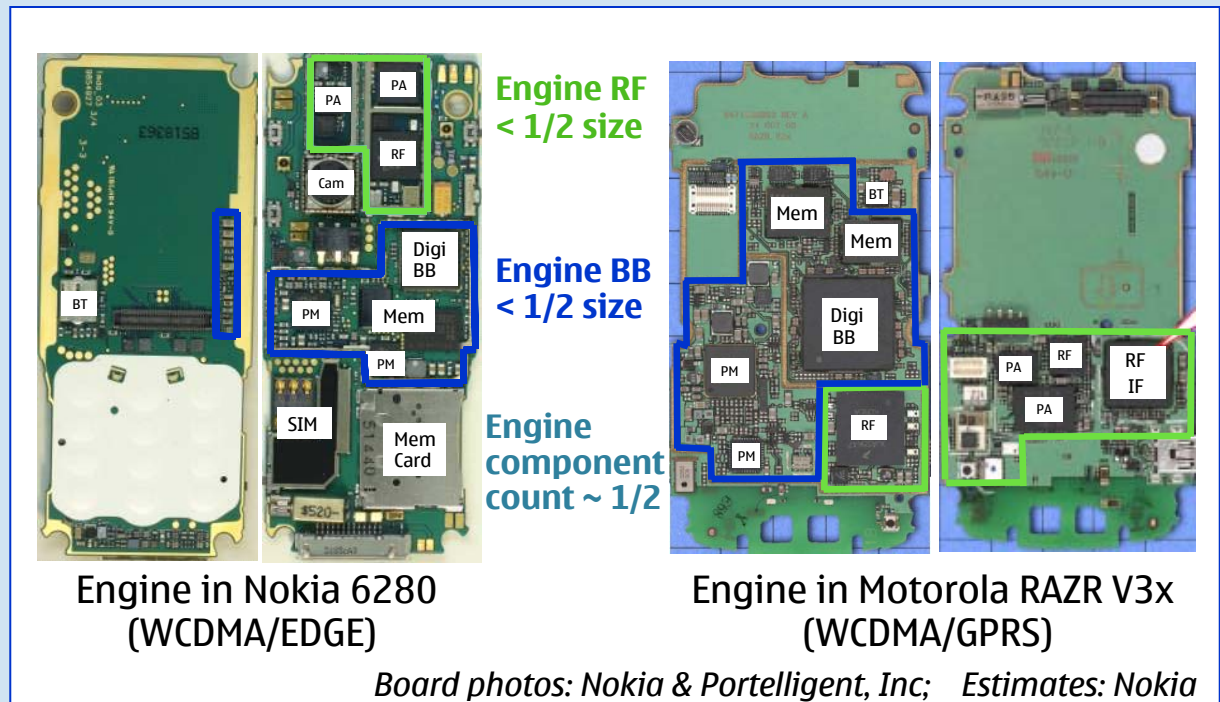

**Meaningful IPR cost advantage**

**Market leadership: estimated 36% device market share in Q3 2006**

*Source: Nokia estimates*

# Chipset cost and size leadership throughout the portfolio

- Smallest and most efficient 3G engines via superior chipset design
  - Lowest component count
  - Smallest die size
  - Lowest total cost
- Optimized business model for perfect-fit in low end

# SW platforms leadership with **long-term unit cost** advantage

## S60 SW Platform on top of Symbian

- R&D on fixed cost basis with in-house design
- IPR creation
- Platform licensing

### Competitive platform

- Superior user experience and feature set
- Unique differentiators and extensibility
- Capability to drive end-to-end experiences with right timing

### Cost efficiency

- SW cost per device minimized
- Predictability of the future SW costs

### Viable industry structure

- Enabling differentiation for device vendors, trade customers and partners, developers, ...

Market leadership with ~50% converged device market share

**NOKIA**

# Ensure competitiveness in differentiating technologies – work with **leading suppliers**

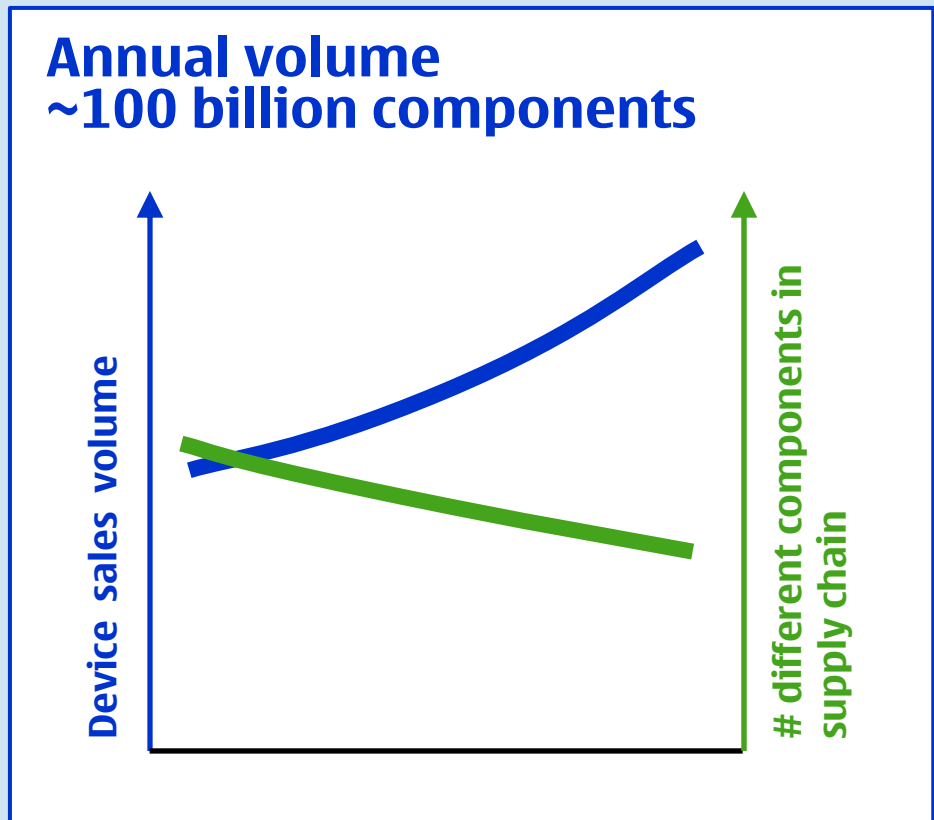

- **Master product architecture, interfaces and system design** to enable efficient integration of leading technologies
  - Optimized HW module portfolios for superior **functionality and cost**
  - **Multi-sourcing**
- Utilizing **external innovation**
  - Open S60 SW platform
  - All major e-mail solutions in Eseries
  - Operator variants and regional customization **cost efficiently**

**NOKIA**

# When differentiation potential is low, capitalize on **economies of scale** with standard components

- Multiple leading suppliers to **ensure quality and cost competitiveness**
- **Optimized reuse** – benefits from material, logistics and operations costs with **largest scale**
- Lump sum based **pricing model** for most 3rd party SW components

# Leading mobile browsing experience with S60 Open Source Browser

## Through Open Source Software model:

- Two-way talent sharing: Nokia contributing to the community, and being able to use external innovation
- Areas critical for differentiation and architectural freedom kept in-house and protected via own IPR
- Cost per device decreased and time to market improved
- Faster introduction of future disruptive technologies

# Achievements in Product Creation Renewal

12% to 8%

-20% (-30%)

-30%

+20%

# Achievements in Product Creation Renewal

From product centric to portfolio and platform centric operational mode

Device R&D from 12% to **8%** of device net sales by end of 2006

Product creation cycle times **-20%** Nokia (**-30%** in ES and M)

Product development cost/selling product **-30%**

**20%** increase in launched products with flat R&D investment

# Nokia Software Updater

– decreased warranty costs and **happier customers**

- Enables software updates by consumers
- Take-off speed exceeded Nokia's expectations – very positive feedback
- Platform mode allows rapid introduction of new supported models
- Savings in warranty costs estimated to be significant

The screenshot shows the Nokia Software Updater website. At the top, there is a green banner with the text "Phone Software Update" and a sub-headline: "Keep your phone software up-to-date, or fix a potential operation problem you may have by updating your phone firmware regularly." Below this is a photo of a smiling man talking on a mobile phone. The main content area has a white background and contains a list of supported phone models: Nokia N72, Nokia N80 (highlighted in green), Nokia N91, Nokia 770 Internet Tablet, and Nokia 6131. To the right of the list is a small image of a Nokia N80 phone. Below the list, there is a link "Find your phone model number." and a note: "There are two updating methods available depending on your product model: over-the-air or via PC." Two options are presented: "Update over-the-air" with bullet points: "Direct to your phone", "No need for a PC", "Mobile internet required", and "Mobile data charges apply"; and "Update via PC" with bullet points: "Windows 2000, XP", "USB PC-phone connection required", and "No mobile data charges". A green button labeled "Update via PC" is visible. At the bottom, there is a "Phone Update FAQ" section with a magnifying glass icon and the text "Questions before you update? Trouble installing? Try our FAQ or Discussions". A large green arrow icon is also present.

# The ABC of creating **thin** products

**A**

Market understanding & portfolio planning

- Using own and external **insight in specifying the products** containing the truly **relevant feature set** and desirable design for the **consumer**
- Allowing more **innovative products with higher risk** in the product portfolio. Ability to make compromises per product, decisions what not to include in the phone.

**B**

Technology

- **Power consumption reduction** together with increases in battery energy density have the biggest size reduction impact
- **Thinness optimized product architecture** to avoid component stacking and other 'thickness creators'

**C**

Implementation capability

- Capability to implement **one-off products** and to **platformize the capability to a broad product family**

# Thinness – without compromises

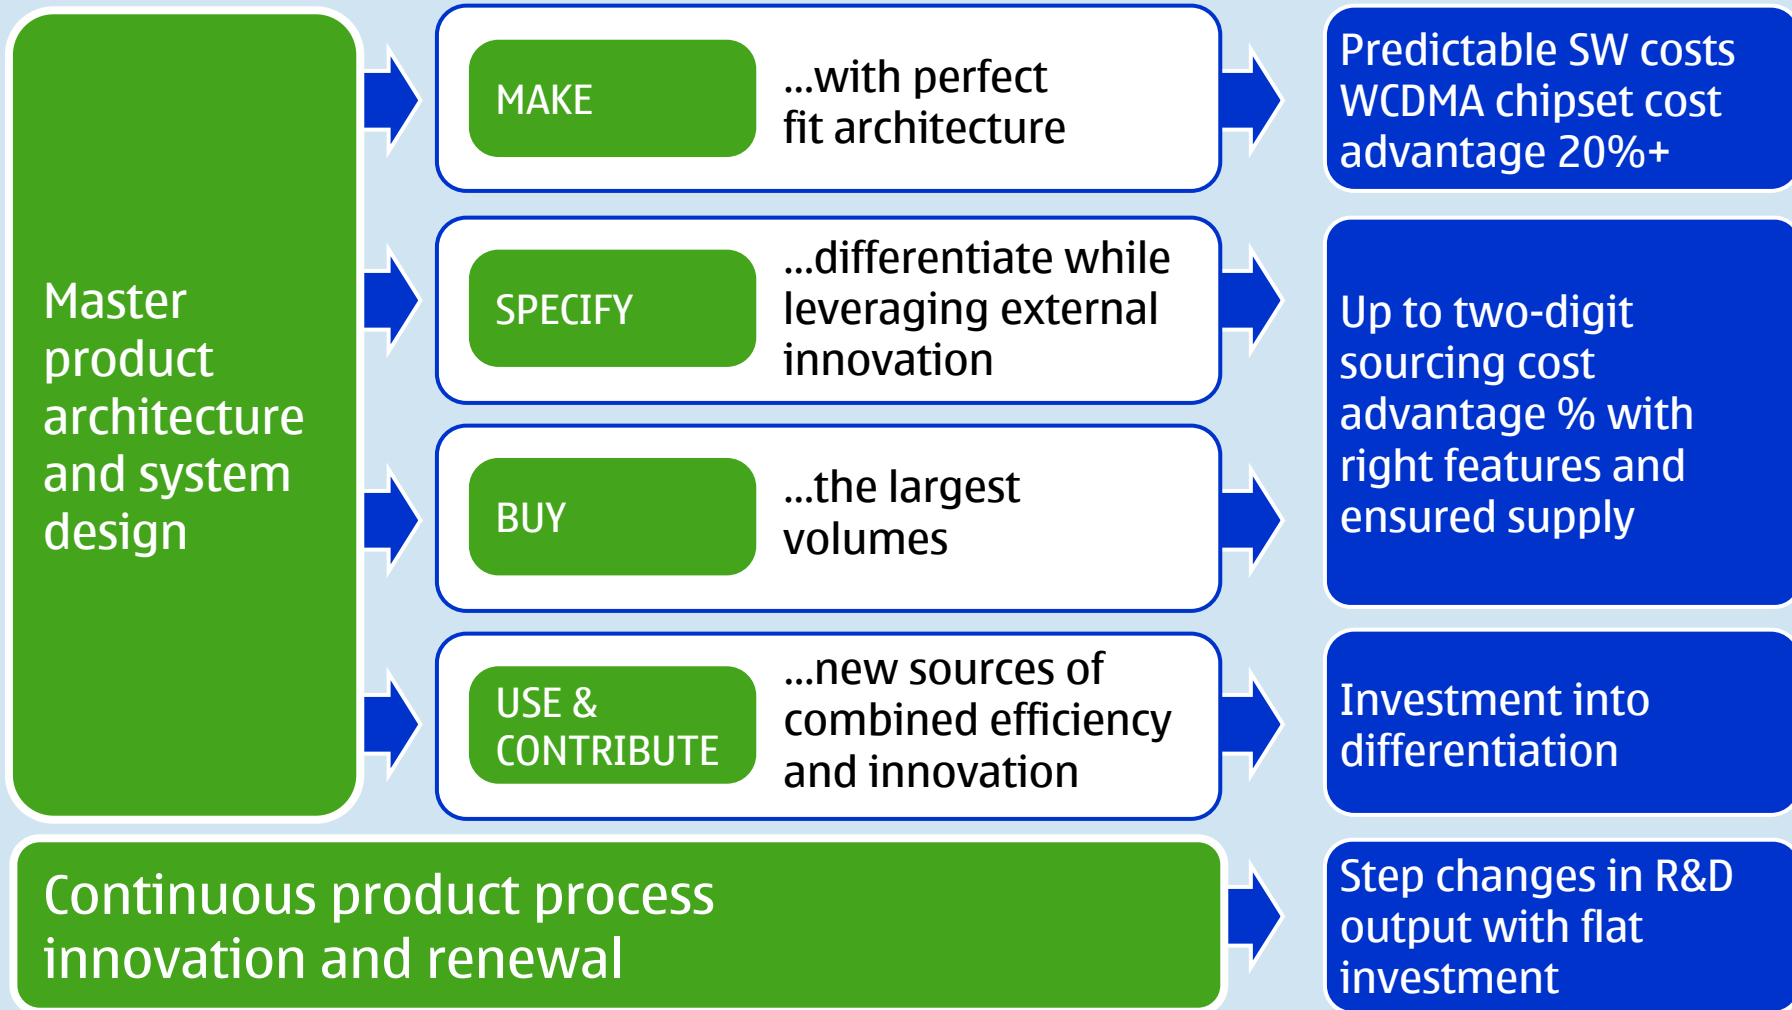

Nokia is committed to have compelling thin and small products **but** without compromises on performance, usability and quality.

## Nokia focus on thinness:

- Drive technological enablers of thinness aggressively
  - they are needed in all cases
- Platformize thinness – it's hygiene, not a feature
- Start with user needs – not with one dimension of physical size
- Sharpen consumer research to focus on the most important product capabilities

# Business benefit through **World Leading R&D**

**NOKIA**
